9. (Currently Cancelled)
10. (New) An animal feed apparatus comprising in combination: a circular container having a peripheral sidewall closed by a bottom panel, and at a top end thereof an outwardly extending integral lip; an interior surface of the sidewall formed with an inwardly directed slope; a lid providing an annular lid lip having plural annular ribs positioned for intimate frictional contact with the sloped sidewall of the container as to cause vacuum engagement therewith to seal the container, the apparatus further comprising a side handle including an outwardly extending portion integral with the lip of the container and a downwardly extending portion spaced apart from the peripheral sidewall, the downwardly extending portion directed at an angle toward the sidewall and flexible for causing a spring clamping action; and a rail engaged between the sidewall and the downwardly extending portion of the side handle, the downwardly extending portion flexibly extended away from the sidewall to cause a spring clamping action for holding the container in place on the rail.
11. (New) The apparatus of claim 10 wherein the side handle provides plural stiffening ribs.
